GENERALIZED INVERSES

DRAGAN S. DJORDJEVIĆ

University of Niš, Faculty of Sciences and Mathematics, 18000 Niš, Serbia

Abstract. In this survey paper we present some aspects of generalized inverses, which are related to inner and outer invertibility, Moore-Penrose inverse, the appropriate reverse order law, and Drazin inverse.

MSC: 47A05, 15A09

Keywords: Drazin inverse, generalized inverses, inner and outer inverse, Moore-Penrose inverse, reverse order law

1. Motivation

A general idea of solving linear equations in Banach spaces can simply be described by the equation

$$Ax = b \tag{1}$$

where A is a linear operator and b is a given vector. The problem is how to find the solution of the above equation. There are several situations: the solution exists and it is unique, the solution exists but it is not unique, or there is no solution of the equation. If A is invertible, then $x = A^{-1}b$ solves the problem. If A
